From: Commanding Officer, Southern Division, Naval Facilities Engineering Command

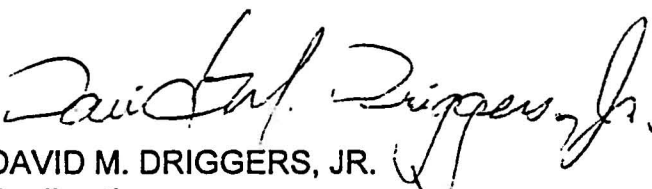

Subj: BIOSLURPER SYSTEM FOR SWMU 7 AT NAVAL STATION MAYPORT, FL

Encl: (1) Draft Full-Scale Conceptual Design of Bioslurper System for SWMU 7 at Naval Station Mayport, Florida
(2) Appendices A-F
(3) Outline for Operations and Maintenance Manual, Full-Scale Bioslurper System, NAVSTA Mayport, Florida

1. Enclosed draft documents are forwarded for your review. We will be discussing SWMU 7 cleanup options during our NS Mayport partnering meeting 28-29 August 1996. Please try to review these documents prior to the partnering meeting.

2. Bioslurping appears to be the most economical technology for remediating SWMU 7. Bioslurping teams vacuum assisted free-product recovery with bioventing to simultaneously recover free-product and remediate the vadose zone. SWMU 7 cleanup funding is available this fiscal year (must be obligated by 30 Sep 96)—we must reach consensus on the cleanup technology by the end of the partnering meeting to ensure adequate time to obligate funding.

3. If you have any comments or need additional information, please contact me at 803-820-5501 (DSN 583-5501).
